1 This has been, without doubt, one of the most preposterous situations I have ever read in my entire life. One would think that nuclear radioactivity from the 1950s testing would have been enough. We already have enough problems in this state from that same time frame. I can't even do a "carbon dating" test in my own Las Vegas backyard due to radioactivity fallout from the 1950s. In addition, our dairys have to go through a "radiation" test from the 1950's...wells in Fallon, Nevada have radioactivity in them...plutonium escaping into our drinking water. Now, to think of 100,000 trips of trucks hauling radioactivity waste into Nevada..one accident via a truck and radioactivity is spread through the air 42 square miles. The casks that store radioactivity to be stored only 1,000 feet over the waterbed that runs directly under Las Vegas?!! None of the past tests involving research into Yucca Mountain have been adequate. We had 24 earthquakes in Las Vegas alone in 1997. Has anyone thought of an earthquake]th
